Website Structure, Functionality & Community Impact Proposal

Taste Buds Catering

Student Number: ST10530540

Taste Buds Catering is a five-page directory website — Home, About, Services, Enquiries and Contact — built to connect event hosts across South Africa with independent local caterers and food trucks. This proposal briefly outlines how the site's structure works and why that structure translates into real income and community benefit.

Structure and functionality

The Home page introduces the platform through a hero section, a three-step "How it works" explainer, and a rotating showcase of featured vendors, giving new visitors an immediate sense of trust and choice. The About page tells the founders' story and states the mission of championing independent food businesses. The Services page lists vendor categories alongside three membership tiers (Starter, Growth, Pro), turning the site into both a discovery tool and a revenue product. The Enquiries page is the functional core: two tabs let a host "Plan an event" or a food business "Become a vendor," each with a tailored form that routes straight to the right internal team. The Contact page adds two physical hubs with embedded maps and a general enquiry form for anything outside those two flows.

Bringing in money

Revenue is generated in two ways. First, vendor membership fees (R349–R699 per month) give food businesses priority placement, unlimited photos and a verified badge, creating predictable recurring income for the platform. Second, every enquiry submitted through the site is a warm lead handed directly to a vendor at no commission cost, meaning vendors keep more of what they earn compared with commission-based delivery apps — making membership an easy value proposition to sell.

Helping independent cooks and the community

Most vendors on the platform are owner-operated: single families or two-person crews who cannot afford a website, marketing budget or tech team of their own. By giving them a professional storefront and a booking calendar for free or at low monthly cost, the site levels the playing field against national franchises. Every booking made through the platform keeps spending inside independent, local kitchens rather than large chains, supporting jobs and

reinvestment within the communities — currently Johannesburg, Cape Town, Soweto and Pretoria — that the vendors operate in.

In short, the site's structure is built to do two things at once: make it effortless for hosts to find real local food, and make it effortless for small food businesses to be found, booked and paid — growing both the platform's revenue and the local food economy it depends on.
